# *The Real Reasons for Autistic Behaviors*

HANDLE is a non-drug approach to neurodevelopmental irregularities that is simple, non-invasive and empowering. It is designed to enhance neurological systems that are causing learning or life difficulties. This 7-hour introductory course teaches the foundations of HANDLE through the lens of the Autism Spectrum Disorder.

Autism is an extreme anxiety disorder. Research supports what parents have been also been saying: that people on the spectrum experience gastrointestinal, neurological, psychological, immunological, and endocrinological complications. It is a systems disorder that requires a systems approach to treatment: an approach based on understanding of the connections and interactions between components of the neurological system.

**September 25, 2010, 9 am – 5 pm. Cost: \$100**
